

K MOHAMMED AFREED

B.Tech Computer Science and Engineering (Core) — SRM University AP

9346827649 | afreedmd236@gmail.com | [GitHub](#) | [LinkedIn](#) | [LeetCode](#) | [CodeChef](#)

Computer Science undergraduate (CGPA 9.64/10) with a research-first approach to problem solving, currently scoping a mobile security system for GPS spoofing detection. Strong foundation in C/C++/Java and competitive programming, actively building backend and full-stack skills through project work.

EDUCATION

SRM University AP — B.Tech, Computer Science and Engineering (Core)

Expected 2029

CGPA: 9.64 / 10

TECHNICAL SKILLS

- **Languages:** C, C++, Java (basics)
- **Currently Learning:** Spring Boot, React, PostgreSQL (as part of an active personal project)
- **Tools & Platforms:** Git/GitHub, LeetCode, CodeChef, HackerRank

PROJECTS

Location Integrity Engine

Personal Project | In Progress

- Designing a mobile security system that scores the trustworthiness of a device's location claims using GPS, motion sensors, timestamps, and historical location evidence.
- Conducted a structured prior-art review across academic research, patents, and existing spoofing-detection tools to scope a defensible, non-duplicative research angle before implementation.
- Architecting an evidence-fusion approach that combines multiple, potentially noisy or conflicting signals into a single interpretable trust score, rather than relying on any one spoofing indicator.
- Planning the system as a three-tier pipeline — an Android client for sensor data collection, a backend for evidence processing, and a dashboard for visualizing anomalies, confidence scores, and system reasoning — and learning the required stack (Spring Boot, PostgreSQL, React) as part of the build.

Skill Sync

Team Project | 1st Year

- Contributed to the design of a peer-to-peer skill exchange platform matching learners with mentors based on reciprocal skill offerings.
- Helped define the core matching logic connecting what a user wants to learn with what other users can teach.
- Used the AI-assisted development tool Lovable to rapidly prototype and iterate on the application.

HACKATHONS

- **Smart India Hackathon 2026** — Preparing a submission for the agriculture / market linkage track (SIH26132), covering problem framing, proposed solution, and technical approach.

CODING PROFILES

- **CodeChef:** 125+ problems solved, Bronze Problem Solver
- **LeetCode:** Active profile, regular problem-solving practice
- **HackerRank:** Active profile

ACTIVITIES

- Coding Club, SRM University AP — Member; involved in coding activities, hackathon preparation, team formation, and technical skill development.

LANGUAGES

English, Telugu, Hindi, Urdu
